REEVE ALEUTIAN AIRWAYS, INC.

IMPORTANT INFORMATION

FOR OUR PASSENGERS

You are flying aboard an aircraft with a thoroughly trained and experienced Flight Crew. Although it is extremely unlikely that an emergency would occut, you should study this card to learn the exits located nearest your seat and how to open them.

MAIN CABIN DOOR WITH AUTOMATIC INFLATION SLIDE

To Open:
PULL T-handle DOWN. Open door by Lifting bar at bottom of door. (Slide will inflate.) Push T-handle UP to lock door open.

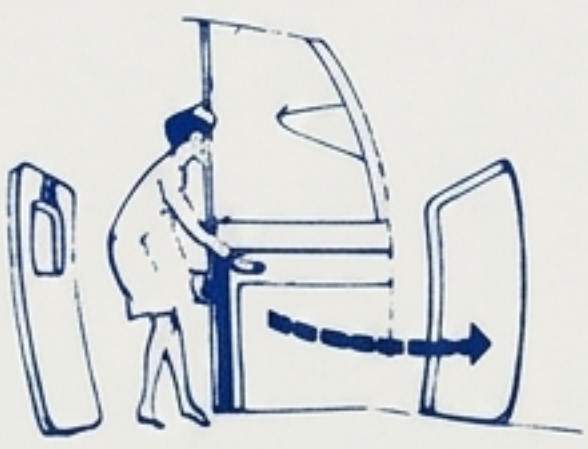
EMERGENCY DOOR WITH AUTOMATIC INFLATION SLIDE

To Open:

REMOVE cover and pull T-handle DOWN. REMOVE door inward and put aside.

STAND TO SIDE

REMOVE slide handle cover and PULL handle UP. (Slide will swing to doorway and inflate.)

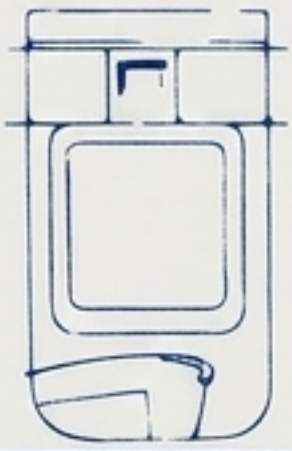


EVACUATION SLIDE

Use manual inflation handle, if necessary

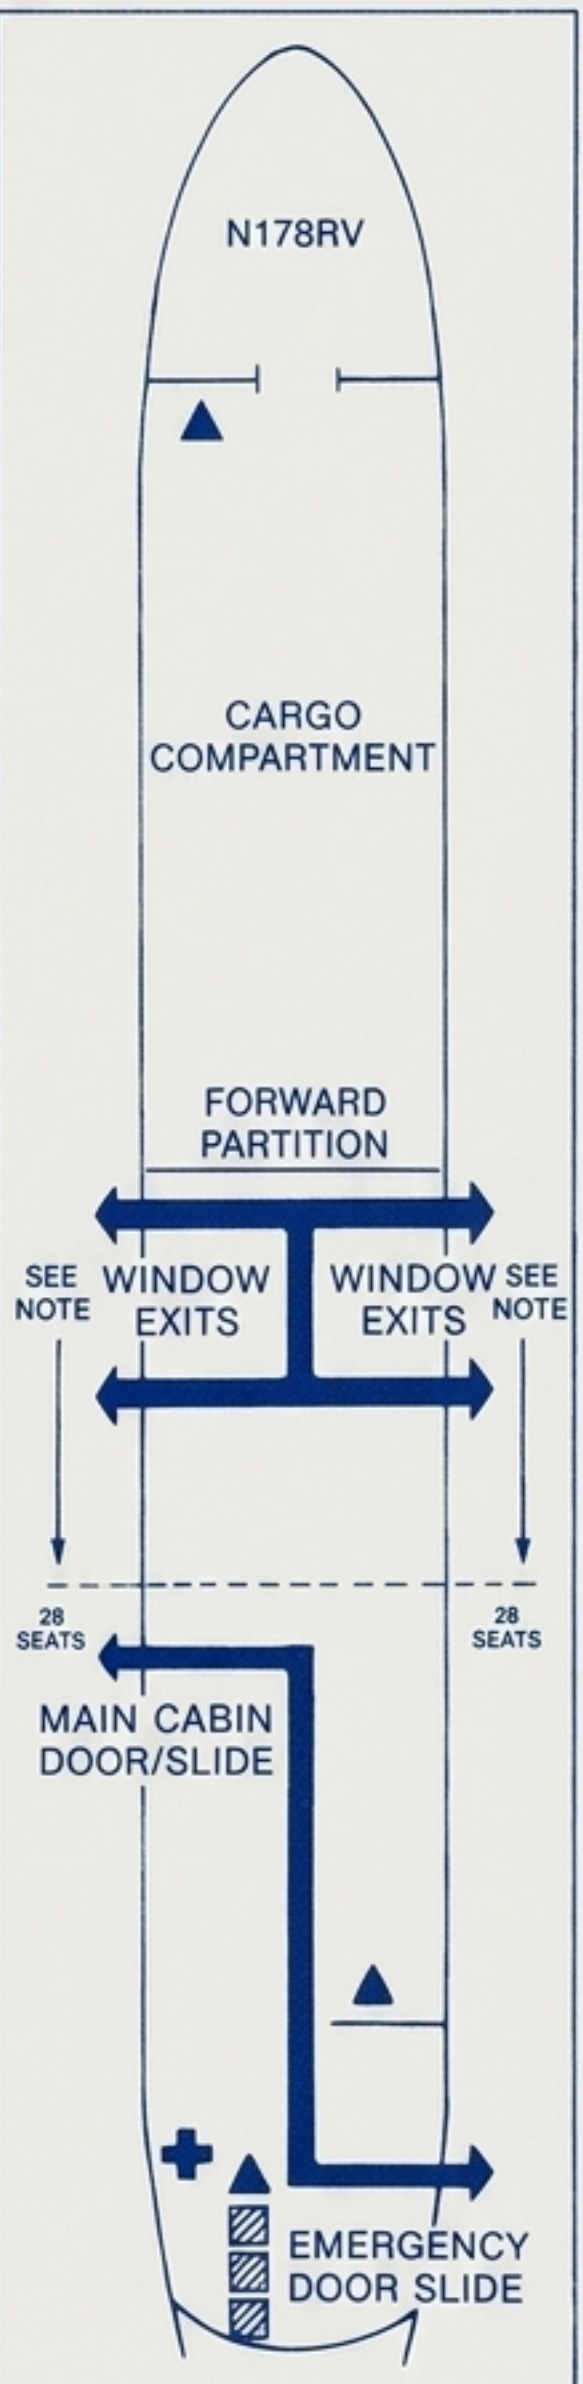
WINDOW EXITS

To Open:
REMOVE cover, PULL T-handle DOWN.
REMOVE window INWARD.



IMPORTANT!

IN OUR 28-SEAT CONFIGURATION, WINDOW EXITS ARE NOT REQUIRED AND ARE NOT AVAILABLE IN PASSENGER CABIN.



PLEASE SEE OTHER SIDE

IMPORTANT INFORMATION FOR OUR PASSENGERS

What to do in case of a water landing:

Your Flight Attendant will help you with the following

1. Put out cigarattes immediately. Put your seat back and tray table in the full upright position.

2. Remove high heeled shoes and cumbersome clothing. Loosen your collar and tie. Remove things that might hurt you, such as eyeglasses, pens and sharp objects.

3. Take your life vest out of the pouch underneath your seat, remove it from the plastic bag, and put it on. (See below) Do NOT inflate it.

4. Sit down and fasten your seat belt TIGHT and LOW. Locate the emergency exits nearest your seat and know how to open them (see other side).

5. A short time before landing you will receive a "Brace" signal. Of the two Brace Positions shown below, use the one that is best suited for the amount of room at your seat. This is IMPORTANT, to reduce the shock of sudden deceleration.

6. AFTER ALL MOTION HAS STOPPED, unfasten your seatbelt and go quickly to the nearest useable exit. Crew members will direct you to rafts.

DO NOT INFLATE VEST INSIDE THE AIRPLANE

1. Take vest out of underseat pouch and remove from plastic bag. Put vest on over your head with bulky section in front.

2. Pass strap to the side, around the back, to the front and fasten. Pull strap to tighten.

3. Inflate AFTER leaving the aircraft by jerking down on two toggles at the bottom. For added buoyancy, blow into tubes at the top.

Crew members will be identified by pink or orange vests.

This aircraft is in constant radio contact with Company and FAA radio stations, in the event of an emergency, Search and Rescue operations will be put into action immediately.

BRACE POSITIONS

Use this position if you don't have enough room for the other.

ELECTRONIC DEVICES —

Federal Aviation Regulations permit ONLY the following electronic devices to be operated aboard Reeve Aleutian Airways aircraft: heart pacemakers, hearing aids, electric shavers, and portable voice recorders.

NOTE: Operation of portable radios is NOT allowed by R.A.A.

PLEASE DO NOT REMOVE THIS CARD FROM AIRPLANE
